

ZENITH

Roller Furling Mainsail

NOW, with Doyle's NEW "Zenith" roller furling Mainsail, you can still have the ease of in-mast roller furling without giving up the performance of a conventional mainsail.

The Doyle "Zenith" Mainsail incorporates three, revolutionary, full length Vertical battens that maintain the 10% roach normally sacrificed with a conventional RF Mainsail.

This added area is critical to performance by putting crucial girth back in the top 1/3 of the sail.

Without the Zenith Battens, the head of a normal RF Main is narrow and inefficient.

When furling or reefing, the Zenith battens are parallel to the luff to allow easy furling.

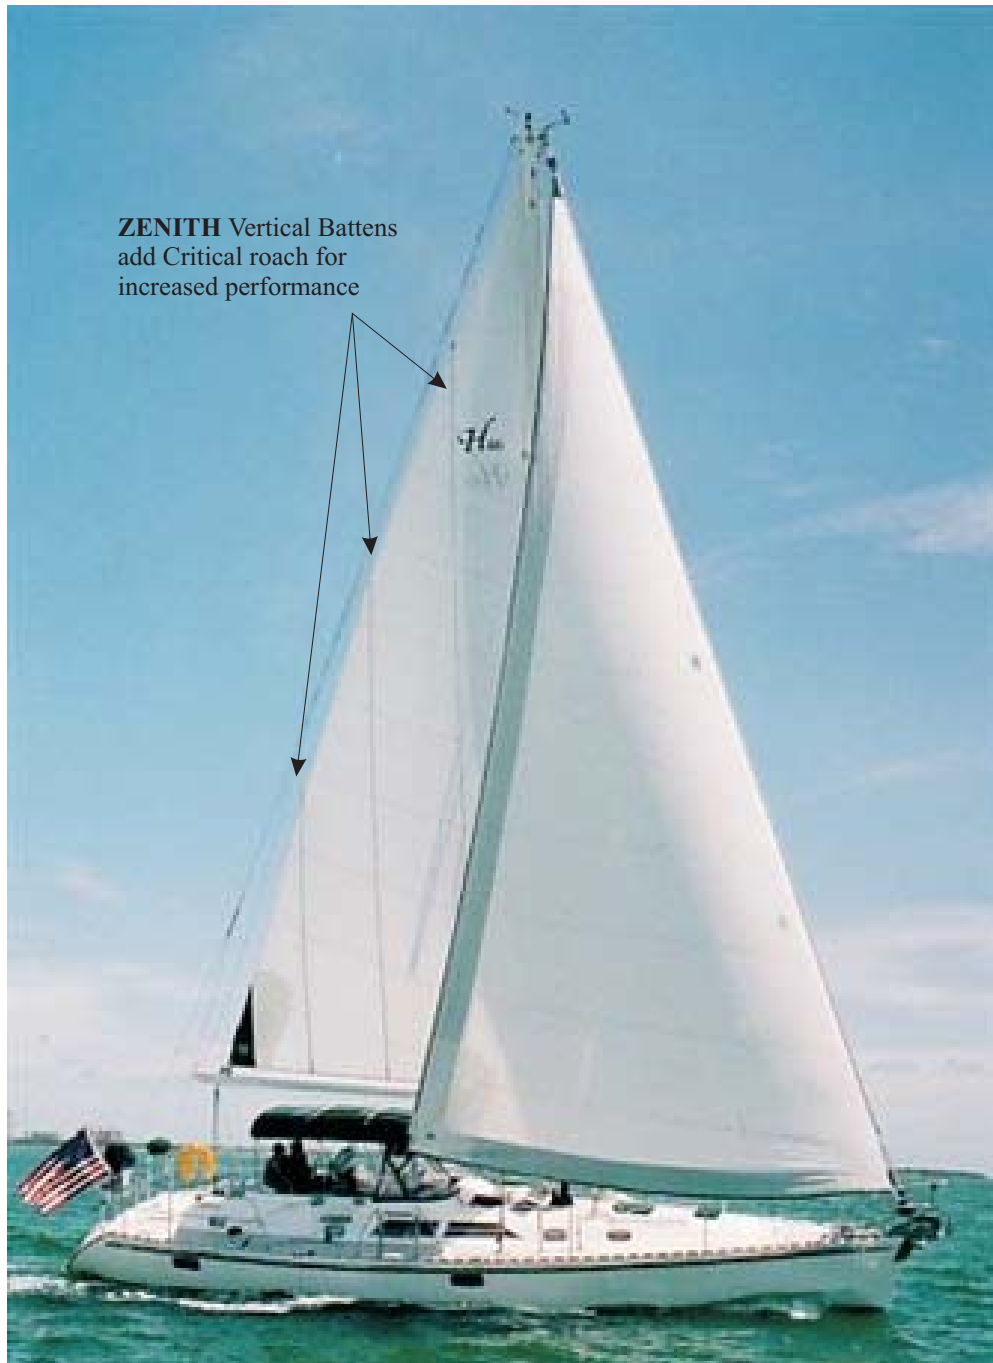

The Doyle Zenith Mainsail, is constructed using Premium Sailcloth and includes an integral Clew Block for maximum sail area.

UV protection is added to the clew to protect the exposed portion of the sail when rolled up.

Large Radial corner patches are used for better load distribution.

Seams are taped as well as sewn for maximum strength. Telltales and sail bag are also included.

The fabrics selected are premium quality for maximum durability and to provide excellent cruising performance season after season.

ZENITH Vertical Battens
add Critical roach for
increased performance
